

The Cookbook

**Matt Borowsky, Shahzore Qureshi,
Lauren Ryan**

Overall Status

- Created MVC .NET schema:
 - Created most models
 - Necessary controllers and correct routing for each action and corresponding view.
- MSSQL database and preliminary tables set up (locally)
- Login security is set up (1-step registration for now, later authenticate with email)
- Facebook OAuth Login working (1-step)
- Decided to implement user interface using Twitter Bootstrap, HTML5, CSS3, and Javascript
- Set up AWS services

Challenges

- Designing parent/child relationships between data types
- AWS API can be challenging to work with

What's left to be done

- Put our database on AWS
- Email authentication through AWS
- Implement:
 - News feed
 - Posting of recipes
 - Account settings
 - Search
 - Following other users

UI Mockup
